iCare HOME2

Keeping an eye on your IOP

What is IOP?

IOP, or intraocular pressure, is a term used to indicate how much fluid pressure you have inside your eye. At times, your eye may produce too much fluid or not drain the fluid properly. High eye pressure is a significant risk factor for glaucoma. For this reason, it is important to have your eyes examined regularly after the age of 40, where your doctor will routinely measure your IOP.

Why at home?

During an ophthalmology visit, your eye pressure is generally measured only once or twice. Studies have shown that IOP can vary throughout the day and night, with up to two thirds of patients having IOP peaks outside of office hours. Therefore, having patients measure their eye pressure at home several times a day can provide valuable additional information.

From the iCare HOME2 measurements, your doctor will gain important insights on the true level of your IOP, assisting in personalizing your glaucoma treatment plan.

What is iCare HOME2?

iCare HOME2 is a handheld, battery operated tonometer, a device that measures your intraocular pressure. The device is portable and designed for self-use at home, or on the go.

iCare HOME2 is gentle, fast and easy to use. You don't need to write anything down, the HOME2 displays your results digitally, either on the screen, in the mobile PATIENT2 app or within your online CLOUD account. iCare HOME2 enables you to get a deeper insight into the behavior of your IOP, over the long term. You can easily share your IOP results remotely with your ophthalmologist.

“The difference between readings we obtain in the office and the data from the iCare HOME is like the difference between a single snapshot and a continuous movie of a patient’s daily life.”

Ike K. Ahmed, MD, FRCSC
(Mapping Diurnal IOP Fluctuations At Home,
Insert To Glaucoma Today)

With the PATIENT2 app, you can follow the changes in your IOP throughout the day and night.

“The iCare HOME saved my sight. After taking my eye pressure at home, the doctor changed my treatment plan, which slowed my glaucoma progression.”

Paul, Glaucoma Patient

iCare. For better perception.

iCare is a trusted partner in ophthalmic diagnostics, offering physicians fast, easy-to-use, and reliable tools for diagnosis of glaucoma, diabetic retinopathy, and macular degeneration (AMD). Our product assortment includes automated TrueColor imaging devices, perimeters and handheld rebound tonometers.

We believe that ophthalmic care must be accessible, effortless, and reliable, and we aim to establish the next level of eye care.
